

CURRICULUM VITAE

Jason Piers Wilton Hall

Department of Entomology
National Museum of Natural History
Smithsonian Institution
Washington, DC, USA
Tel: (202) 633 1047
Email: halljrios@yahoo.com

Education:

- 1994-1999 Ph.D., Department of Entomology and Nematology,
University of Florida, Gainesville, USA
1990-1993 B.A., M.A. Honours, Department of Zoology,
St. Johns College, Oxford University, Oxford, UK

Grants and Awards:

- 2007-2011 National Science Foundation Grant
(Principal Investigator on Biodiversity Surveys & Inventories Grant
DEB# 0639977 - “Collaborative Research: The Butterflies of
Ecuador (Lepidoptera: Papilioidea) - A Comprehensive Survey of
a Megadiverse Fauna”)
- 2003 Royal Entomological Society Award
(for best paper in the journal *Systematic Entomology* during 2001-2 –
Willmott, K. R., J. P. W. Hall, and G. Lamas. Systematics of
Hypanartia (Lepidoptera: Nymphalidae: Nymphalinae), with a test
for speciation mechanisms in the Andes)
- 2001-2006 National Science Foundation Grant
(Principal Investigator on Biodiversity Surveys & Inventories Grant
0103746 - “Survey of the Andean butterfly fauna of Ecuador”)
- 2001-2002 Smithsonian Postdoctoral Fellowship
(National Museum of Natural History, Washington, DC)
- 1999-2000 Smithsonian Postdoctoral Fellowship
(National Museum of Natural History, Washington, DC)
- 1999 J. Turner Predoctoral Fellowship
(University of Florida, Gainesville, FL)
- 1998 Collections Studies Grant

- (American Museum of Natural History, New York, NY)
- 1997-2000 National Geographic Society Grant
 (Joint Principal Investigator on Research and Exploration Grant # 96-5751)
- 1996 Sigma-Xi, Grant-in-aid of Research
- 1995 Sigma-Xi, Grant-in-aid of Research
- 1993 Grants awarded for "Oxford and Cambridge Butterfly Expedition to Ecuador 1993"
 (including Royal Entomological Society, Oxford University [Poulton Fund], and Cambridge University [Balfour Browne Fund])

Positions held:

- 2005 President of the Entomological Society of Washington, Washington, DC
- 2004 President-elect of the Entomological Society of Washington, Washington, DC
- 2002- Research Entomologist, Department of Entomology, National Museum of Natural History, Smithsonian Institution (Trust Fund)
- 1999-2002 Smithsonian Postdoctoral Fellow, Department of Entomology, National Museum of Natural History, Smithsonian Institution
- 1999-2002 Research Associate, Department of Entomology, National Museum of Natural History, Smithsonian Institution
- 1999-2000 Affiliate Faculty, Department of Zoology, University of Florida
- 1994-1999 Research Assistant, Schaus Swallowtail Recovery Program, University of Florida

Research interests:

Broadly, my research interests cover the evolution, systematics, phylogenetics, biogeography, ecology and conservation of butterflies, particularly those from the Neotropics and those belonging to the family Riodinidae. The systematics of this almost exclusively Neotropical family of approximately 1400 species was until recently perhaps the most poorly known of all the butterfly families. As a group it also presents an endlessly fascinating array of ecological research topics, most of which are in their infancy, including species specific male perching behaviors in time and space which relate to reproductive isolation and niche partitioning, mimicry amongst each other and of almost every other butterfly family, and myrmecophily and larval-ant communication. My research on riodinid butterflies has shed light on several topics of broad evolutionary interest, including the evolution of myrmecophily and aphytophagy, providing new theories on the relationships between morphology and nutritional ecology, generating more detailed hypotheses of Amazonian area relationships and vertical parapatric montane speciation than have ever been published before using either vertebrates or invertebrates, and a revised estimate of the age of the Riodinidae based on evidence from Dominican amber fossils.

Specific short-term research goals include creating natural generic classifications for the most poorly known riodinid tribes, the Nymphidiini (the largest myrmecophilous riodinid group) and the Symmachiaini, using predominantly morphological character sets but also molecular ones when the former do not provide sufficient phylogenetic information, and generating a comprehensive generic-level phylogenetic hypothesis for the Riodinidae based on molecular evidence from 2-4 genes (in collaboration with Naomi Pierce's Harvard lab). My involvement

with the alpha taxonomy of butterflies, particularly riordinids, will continue as an essential component of completing two longer term research goals, a five volume comprehensive work on the Papilionoidea of Ecuador (with Keith R. Willmott), the first for any Neotropical country, and a book on the Riordinidae of the Neotropics, providing a comprehensive systematic and pictorial treatment, and a synthesis of our biological knowledge on the group.

During the course of my research, I have also visited numerous private collections around the World, and most of the major museums throughout the Americas and Europe to examine, dissect and curate Neotropical butterflies:

Americas: Cambridge, USA – MCZ; New York, USA – AMNH; Reading, USA – RPM; Pittsburgh, USA – CMNH; Washington, USA – USNM; Gainesville, USA – FSCA; Sarasota, USA – AME; Quito, Ecuador – MECN and QCAZ; Lima, Peru - MUSM; and

Europe: London, UK – BMNH; Oxford, UK – OXF; Paris, France – MNHN; Berlin, Germany – ZMHU; Dresden, Germany – SMTD; Frankfurt, Germany – SMF; Munich, Germany – ZSM; Stuttgart, Germany – SMS.

Field work:

I have conducted fieldwork in east Africa, throughout Asia and Australasia, and the majority of countries in Central and tropical South America as follows:

Neotropics: Mexico (3 trips), Guatemala, Belize, Honduras, Costa Rica, Venezuela, Trinidad & Tobago, Ecuador (12 trips), Peru, Bolivia, Brazil;

Afrotropics: Kenya;

Oriental region: Malaysia, Taiwan, Philippines (2 trips), Papua New Guinea, Australia, Solomon Islands.

Since 1991, I have completed nearly a year and a half of intensive fieldwork in Ecuador, where with Keith R. Willmott I have gathered voluminous ecological information and compiled one of the most extensive butterfly research collections and databases for any Neotropical country.

Scientific Publications:

Books:
